

The National Science Center

*A public-private partnership with
the United States Army*

August 2, 1999

To Whom it May Concern:

The staff of the National Science Center's Fort Discovery chose Maltbie Associates as the fabricator for a 250 exhibit contract. Maltbie had a little over one year to complete and install the exhibits.

Terry Murphy was the senior person for overall direction of the exhibit fabrication. Terry's range of knowledge is remarkable. The company that designed the exhibits was no longer associated with the project and it became necessary for Terry to not only fabricate, but also re-engineer many of the exhibits to make them work properly.

We were impressed with Terry's skills and attitude. He was very concerned about meeting all the timeline requirements and not exceeding the budget. Terry is a team player and he was extremely cooperative with our staff during the fabrication and installation, discussing every probable change or problem immediately.

After years of experience with Maltbie, Terry has decided to start his own company, Exhibit Engineering. I highly recommend Terry Murphy and encourage him in this new endeavor. His experience, expertise, and knowledge will make Exhibit Engineering a valued company in the exhibit fabrication field.

Sincerely,

Phyllis Hennecy Hendry
President
